Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Monoclonal antibody e23 was generated by immunising mice with N/erbB-2 cells overexpressing the gpl85 protein, removing spleen cells and producing hybridomas by standard techniques. Messenger RNA coding for the anti-erbB-2 monoclonal antibody was isolated and converted to cDNA. Regions coding for the heavy- and light- chain variable regions were then amplified by PCR and joined via a sequence encoding a peptide linker. The resulting single-chain antibody is useful for in vitro diagnosis of tumour cells which overexpress the erbB-2 gpl85 marker, e.g. breast, ovarian and non-small cell lung carcinomas, and, when coupled to a cytotoxic agent, to treat such tumours.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example; Fig 7; 37pp; English.

The source of human erbB-2 protein for the prodn. of antibodies not and 21 (055180/R45442; 055181/R45443) is a NIH/3T3 cell 23 and 21 (055180/R45442; 055181/R45443) is a NIH/3T3 cell engineered to express the human erbB-2 protein on its surface (N/erbB-2). Abs no. 21 and 23 are directed against the extracellular domain of gpl85 erbB-2. Nude mice manipulated to produce rapidly growing tumours were used in a trial of the efficacy of the Abs. I animals given a combination of the 2 Abs, tumours completely regressed after 11 days.
                                             soluble fraction by co-expression with chaperonin. Using the methods scFv can be produced in E. coli, either in a soluble fraction or in inclusion bodies. Like the parent double chain antibodies, the scFv polypeptides are useful in immunological diagnosis or for separation and purification, but they lessen the side effects caused by antibody constant regions. The availability of scFv polypeptides contributes to fundamental research and development of diagnostic and therapeutic
                                                                                                                                                                                                                               Producing single chain Fv antibody in Escherichia coli - by expression in an inclusion body, followed by protein folding or by co-expression with a chaperonin as a soluble fraction Claim 4; Page 6-7; 9pp; Japanese.

The sequences given in W25783-84 represent single chain Fv (scFv) antibodies which are produced in E.coli. The scFv's are derived from an anti-T3 antibody or an anti-T9130 antibody and are produced either by: (1) expression as an inclusion body, followed by folding (1.e. by denaturation and solubilisation) or (2) expression as an entity of the method of the protein by converges on the protein with chaperonia Instant the method of the protein by converges on the protein with chaperonia Instant the method of the protein by converges on the protein with the protein the method of the protein the protein with the protein the method of the protein the protein with the protein the protein the protein with the protein the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Single chain Fv; scFv; antibody; E. coli; anti-T3 antibody; anti-gp130 antibody; inclusion body; chaperonin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treatment of 2 monoclonal

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Immunosuppressant polypeptide - has ability to block interleukin-2 response Claim 8; Page 26-27; 37pp; English.

MAD capable of binding to the gamma chain of the IL-2 recept thus of blocking the IL-2 response, is produced by mouse hyb line GP-2 (FERM BP-4641). DNA encoding the variable region this MAD was expressed in E. coli, yielding Fv(GP-2) with immunosuppressive activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Fv(GP-2) immunosuppressive.

Example 1; Fig 11 and Page 29-31; 50pp; English.

The VL and VH sequences of the anti-CD3 hybridoma G19-4 were amplified by PCR methods. A gene fusion was constructed from the two amplified domains and a (G1948er)3 linker. The amino terminus of the VL-VH fusion cassette was fused at the SalI site to the L6 light chain variable region leader peptide and the carboxy-terminus was fused directly to the hinge region of the Fc domain at the BcII site and/or to a short "helical" peptide linker to construct the bispecific CD3-L6FvIg antibody derivative. The variable regions for L6 were fused in frame to the opposite end of the helical linker (not included in R60206).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10 Avo 10...

Claim 2; Columns 27-30; 288p; English.

The present sequence represents a claimed single-chain antibody, 20 designated e21(FV), which binds to erbB-2. Monoclonal antibody e21

Cwas generated by immunising mice with N/erbB-2 cells overexpressing the gp185 protein, removing spleen cells and producing hybridomas 20 cmonoclonal antibody was isolated and converted to cDNA. Regions 20 coding for the heavy- and light- chain variable regions were then 21 coding for the heavy- and light- chain variable regions were then 21 coding for the heavy- and light- chain variable regions were then 22 coding for the heavy- and light- chain variable regions were then 22 coding for the heavy- and light- chain variable regions were then 23 coding for the heavy- and light- chain variable regions were then 24 coding for the heavy- and light- chain antibody is useful for in vitro 25 coding for the process the resulting single-chain antibody is useful for in vitro 27 cd diagnosis of tumour cells which overexpress the erbB-2 gp185 cm arker, e.g. breast, ovarian and non-small cell lung carcinomas, 25 cm 23 paa;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

Example; Fig 8; 37pp; English.

The source of human erbB-2 protein for the prodn. of antibodies in the source of human erbB-2 protein on its surface (Note 1) and 21 (Q55180/R45442; Q55181/R45443) is a NIH/3T3 cell engineered to express the human erbB-2 protein on its surface (Note 1) and 23 are directed against the extracellular domain of gp185 erbB-2. Nude mice manipulated to produce rapidly growing tumours were used in a trial of the efficacy of the Abs.

The surface after 11 days.

PT the serpin enzyme complex receptor, used in gene therapy of the serpin enzyme complex receptor, used in gene therapy of the serpin enzyme series an anti-human SC single chain Fv/protamine fusion protein Sequence containing a target binding molety capable of binding molety. CC This can be used in a method for delivering an oligonucleotide to a commandian cell. The method comprises conjugating the target binding cc mammalian cell. The method comprises conjugating the target binding cc the carrier to an expression vector encoding one or more gene products to form a pharmaceutical composition. A mammalian cell having on its confacted with the pharmaceutical composition under conditions allowing binding to the receptor resulting in delivery of the charmaceutical composition to the introduction of exogenous genetic material composition are used for the introduction of exogenous genetic material composed a functional wild-type or mutant gene or may be an antisense sequence or other nucleic acid having a therapeutic effect. The fusion cc protein may comprise a protein portion having therapeutic properties, cc e.g. enzymatic activity, cytokine activity and antibiotic activity which

Expression-secretion vectors - for prodn. of biologically active antibody Fv fragments or single chain Fv molecules Disclosure; Fig 6; Slpp; English.

This sequence represents a single chain Fv molecule which contains the heavy and light variable portions (VH and VL) of antidigitoxin monoclonal antibody (MAb) 26-10 (see also R34670-71), a signal sequence (see R38527-28) and a linker between the two variable regions. The DNA sequence encoding this protein was used in the construction of an expression-secretion system for the production of biologically active Fv fragments. The system also contains a DNA sequence encoding the T7 promoter. The secretion-expression vector was produced by polymerase chain reaction Fv fragments
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               is delivered to a cell surface via the SECR binding moiety. The nucleic acid can be compacted at high concentrations with the carrier molecule a critical salt concentration. The condensation of such complexes provides structural features to the DNA/cationic lipid complex that prolong in vivo expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ន្តន្តន្ត
                                                                                                                      The multifunctional protein comprises a single chain biosynthetic Ab binding site (comprising sequences minicking the light chain and heavy chain variable regions of murine monoclonal 26-10) with the specificity of murine monoclonal 26-10, linked through a spacer to the FB fragment of protein A, here fused as a leader, and constituting a binding site for FC protein A, here fused as a leader, and constituting a binding site for FC protein A, here fused as a leader, and constituting a binding site for FC protein C adilute acid cleavage site). The construct contains the light spacer contains among acids of the FB followed by Asp-Pro ( a dilute acid cleavage site). The construct contains commarised as: FB-Asp-Pro-VI-(G14-Ser)3-VH. The protein can be used for specific binding assays, affinity purificn. biocatalysts, targetting, imaging an immunological treatment of oncogenic and infectious diseases. It offers fewer cleavage sites to circulating proteolytic enzymes, and comproved stability. It reaches target tissues rapidly and its quickly cleared from the body. It also has reduced immunogenicity and its design facilitates binding to other moieties in drug targetting and imaging

                                                                                                                                                                  for labelled or immobilised antibody, are less immunogenic, easier to engineer, more stable and less expensive Example 9; Fig 39A-B; 78pp; English.

C Computer-designed construct 18-2-3/TRY202 (W02191), encoded by the DNA sequence given in T36463, comprises the variable regions of the light and heavy chains of anti-fluorescein monoclonal cantibody (Mab) 18-2-3 linked by a peptide designed to fit into a groove on the backside of the variable domain structure. The DNA construct was inserted into vector pGX3703 and introduced into E. coli. 18-2-3/TRY202' was produced as a single chain molecule. It cexhibited biological binding activity equivalent in specifically and affinity to that of the original MAb.
                                                                                                                                                                                                                                                                                                                                                                                                              21-MAY-1996.

PT Single chain poly:peptide for binding antigen - comprising light PT and heavy chain antigen binding portions linked by peptide linker PS Example 9; Figure 39; 78pp; English.

CC The single chain polypeptide is derived from the mature light and CC heavy chains of a monoclonal antibody (MAb) and has affinity CC for a given antigen (Fluorescein). It comprises a first CC comprising the antigen binding portion of of the light CC comprising the antibody and a second polypeptide CC comprising the antibody and a second polypeptide CC comprising the antibody and a second polypeptide CC crain variable region of an antibody and a second polypeptide comprising the antipody and at least one peptide linker linking the CC crist and second polypeptide chains. The resulting single chain CC polypeptide can be used in diagnostics, therapy CC (in vivo and in vitro), imaging, purifications and biosensors.

CC This particular single chain binding molecule was designated CC sequence 23 and contains one linker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                          Immuno:purifico. using single binding chain molecule including parts of antibody light and heavy chain variable regions connected by a linker - is smaller, stabler and less expensive than complete antibodies

Example 9; Fig 39; 78pp; English.

A DNA construct (713739) codes for single chain binding molecule 18-2-3/TRY202' (R99649), in which VL and VH regions of anti-C increscein monoclonal antibody 18-2-3 are joined by a peptide linker composed primarily of alternating Gly and Ser residues, with C Glu and Lys residues to enhance solubility. The construct was cobtd. which was capable of exhibiting a biological binding activity cobtd. which was capable of exhibiting a biological binding activity antibody. SCAS (see also R99645-48 and T99650-51) have the advantages of smaller size, greater stability and reduced cost.
                                                                                                                                                                                                                                                               Query Match
